Description

According to the survey, the number of currently uninsured adults dropped from 37 million in 2010 to 24 million in 2020. However, the number of those insured, but underinsured (those with such high out-of-pocket costs or deductibles relative to income that they were effectively underinsured) had increased from 29 million in 2010 to 41 million in 2020. This statistic displays the number of health insured vs. uninsured adults in millions in the United States from 2003 to 2020.

Description

In the first half of 2021, approximately 31.1 million people in the United States had no health insurance. The share of Americans without health insurance was steadily decreasing until 2015, but has been increasing since 2017. The Tax Cuts and Jobs Act of 2017 caused this change, because it repealed the individual mandate, which penalized individuals for failing to maintain health coverage.

Positive impact of Affordable Care Act
In the U.S. there are public and private forms of health insurance, as well as social welfare programs such as Medicaid and programs just for veterans such as CHAMPVA. The Affordable Care Act (ACA) was enacted in 2010, which dramatically reduced the share of uninsured Americans , though there's still room for improvement. In spite of its success in providing more Americans with health insurance, ACA has had an almost equal number of proponents and opponents since its introduction, though the share of Americans in favor of it has risen since mid-2017 to the majority.

Persistent disparity among ethnic groups
The share of uninsured people is higher in certain demographic groups. For instance, Hispanics continue to be the ethnic group with the highest rate of uninsured people , even after ACA. Meanwhile the share of uninsured White and Asian people is lower than the national average.

Description

In the first half of 2021, 9.6 percent of all people in the United States didn't have health insurance. This share of uninsured U.S. individuals began to fall after the Affordable Care Act (ACA, also known colloquially as Obamacare) was signed into law in 2010, but has begun to creep up since the Tax Cuts and Jobs Act of 2017 came into force and repealed the individual mandate, which punished individuals for failing to maintain health insurance coverage.

More coverage after Obamacare
The groups who saw the biggest improvement in health insurance coverage after the ACA was enacted were Hispanic and Black Americans . Meanwhile, the share of White Americans without health insurance also fell due to Obamacare, but the drop in that group wasn't as dramatic as in other ethnic groups. This is primarily due to the fact that the uninsured rate among White Americans was much lower pre-ACA than among any other group, so there was less room for improvement.

ACA was especially significant for those with low income
Although the ACA was signed into law in 2010, many of its major provisions didn't come into force until 2014, which accounts for the sharp drop in Americans without health insurance in 2014. Adults with a family income lower than 200% of Federal Poverty Level (FPL) were especially impacted by the law, as the share of uninsured adults in this income group dropped 14 percent between 2013 and 2015.

| Notes: | <i>Hispanic origin and race are two separate and distinct categories. People of Hispanic or Latino origin may be of any race or combination of races. Hispanic or Latino origin includes people of Mexican, Puerto Rican, Cuban, Central and South American, or Spanish origin. Race is based on respondents` d [...] For more information visit our Website</i> |

Description

In the first half of 2021, almost a quarter of the Hispanic population in the United States did not have health insurance, up from a historical low of 19.3 percent in 2016. In 2021, the national average was 11.4 percent. White Americans had a below average rate of just 7.5 percent, whereas 11.8 percent of Black Americans had no health insurance.

Impact of the Affordable Care Act
The Affordable Care Act (ACA), also known as Obamacare, was enacted in March 2010, which expanded the Medicaid program , made affordable health insurance available to more people and aimed to lower health care costs by supporting innovative medical care delivery methods. Though it was enacted in 2010, the full effects of it weren't seen until 2013, when government-run insurance marketplaces such as HealthCare.gov were opened. The number of Americans without health insurance fell significantly between 2010 and 2015 , but began to rise again after 2016.

What caused the change?
The Tax Cuts and Jobs Act of 2017 has played a role in decreasing the number of Americans with health insurance, because the individual mandate was repealed. The aim of the individual mandate (part of the ACA) was to ensure that all Americans had health coverage and thus spread the costs over the young, old, sick and healthy by imposing a large tax fine on those without coverage.

Notes: *For 2019, states moving forward with Medicaid expansion included: Alaska, Arizona, Arkansas, California, Colorado, Connecticut, Delaware, Hawaii, Illinois, Indiana, Iowa, Kentucky, Louisiana, Maine, Maryland, Massachusetts, Michigan, Minnesota, Montana, Nevada, New Hampshire, New Jersey, New Mexico, [...] For more information visit our Website*

Description

In the first half of 2021, one fifth of U.S. adults in non-Medicaid expansion states did not have health insurance. In comparison, just one in ten of U.S. adults in Medicaid expansion states were uninsured. There was a difference in the uninsured rate between these states even before Medicaid expansion, but the expansion due to ACA has made the gap much larger. This statistic shows the percentage of adults aged 18-64 years without health insurance in the United States from 2010 to June 2021, by state Medicaid expansion status.
